Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-26, drawn to a DNA construct comprising a promoter element, a leader sequence and a downstream box element, and a method for its use for enhanced plastid expression of a heterologous gene.

Group II, claim(s) 27-28, drawn to a method for modifying codon usage in structural genes.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The invention of Group I, drawn to a first product and method of use, and that of Group II, drawn to a second method, do not share a technical feature. The method of Group II would not make the product of Group I. Furthermore, the technical feature of Group I is not special. Zoubenko et al (1994, Nuc. Acids Res. 22:3819-3824; cited in the Written Opinion) teach a chloroplast expression vector comprising a recombinant construct comprising an *rrn* promoter and a heterologous *aadA* gene encoding a spectinomycin resistance protein (pg 3820, left column, paragraphs 3-4), wherein the promoters and constructs would inherently comprise the native leader sequence and downstream box element.

Different nucleotide sequences are structurally distinct chemical compounds and are unrelated to one another. These sequences are thus deemed to normally constitute **independent**

Art Unit: 1638

and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide sequence is presumed to represent an independent and distinct invention, subject to a restriction requirement pursuant to 35 U.S.C. 121 and 37 CFR 1.141 et seq (see MPEP 803.04 and 2434).

If Applicant elects Group I, Applicant is additionally required to select a single nucleotide sequence for said Group. This requirement is not to be construed as a requirement for an election of species, since each nucleotide and amino acid sequence is not a member of single genus of invention, but constitutes an independent and patentably distinct invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
